**Minimum Disclosure Document****Manager Commentary**

The most important local event during the month, namely the Medium Term Budget Policy Statement (MTBPS), was luckily not impacted by the controversy relating to the revelations by the then Finance Minister (FM), Nhlanhla Nene, that he also attended numerous meetings with the Guptas. Subsequently, FM Nene requested that President Ramaphosa release him from his post. Market nervousness followed, because of the uncertainty of how long he would remain in this post and also who his potential replacement would be. President Ramaphosa ended this nervous tension, by accepting FM Nene's resignation and appointing the former SARB Governor and former Minister of Labour, Tito Mboweni, as his replacement. The markets were surprised by this appointment and reacted positively.

The MTBPS, as presented by the new FM Tito Mboweni, was, although realistic, still more negative than expected. This was because of a 0.5% fiscal slippage in the projected budget deficit for FY 2018/19, from 3.8% (as in the March 2018 main budget) to 4.3% of GDP. Additionally, the forecasted fiscal consolidation in FY 2021/22, with debt reaching a maximum of 56.2% of GDP, have been moved out to FY 2023/24 and the new debt to GDP high will be 59.6%. This together with other negative comments seems to have raised the risk that Moody's will change the outlook on its local and foreign SA Baa3 ratings from Stable to Negative.

Economic data so far points to slightly positive GDP growth in 3Q2018. Total vehicle sales grew by 0.9% m/m in September, after falling 2.0% in August. August retail sales surprised to the upside at 2.5% y/y. Manufacturing output showed resilience in August, delivering better than expected growth of 1.3% y/y. Seasonally-adjusted mining output fell 1.2% m/m in August following the sharp 8.3% m/m decline in July.

Headline inflation (CPI YOY) for September was unchanged from August at 4.9%. Food price inflation increased substantially, but was offset by fuel price inflation. PPI inflation (PPI YOY) improved slightly from 6.3% to 6.2%, due to a combination of base effects and unchanged fuel prices.

At the SARB's October Monetary Policy Review, Governor Kganyago stated that the continued widening of the output gap, as a result of the poor growth in 1H2018, and the deterioration of the inflation outlook because of the weak currency and higher oil prices, are the problems that they face. Deputy Governor Mminele, stated again that they will look through first-round effects and try to control second-round effects, which are as of yet not visible in core inflation. They also believe that the weaker exchange rate and higher oil prices will lead to higher inflation in the coming quarters, with a peak in 2Q2019. This reiterates their hawkish stance.

The USD strengthened significantly over October, causing the USDZAR to weaken from 14.17 to 14.77. The US equity markets corrected significantly during the month, after rallying substantially the whole year. This correction affected all other stock markets.

The 10 YR SA government bond yield weakened to 9.63% from 9.22%, with Rand weakness and the weak MTBPS playing a large part. The trade balance decreased to a deficit of ZAR2.95bn in September from a surplus of ZAR8.77bn in August.

The MM yield curve steepened a bit during the month as a result of the Rand weakening. Looking at the implied three month forward rates in the curve, roughly two 25 bps rate hikes are still priced in by the market over the next year.

**Glossary of Terms**

**Volatility** is a statistical measure of the dispersion of returns for a given security or market index.

**Tracking error** is a measure of the risk in an investment portfolio that is due to active management decisions made by the portfolio manager; it indicates how closely a portfolio follows the index to which it is benchmarked.

**Information ratio**, is a measure of the risk-adjusted return of a portfolio. In this case, it measures the active return of the manager's portfolio divided by the amount of risk that the manager takes relative to the benchmark.

**Sharpe Ratio** is a measure for calculating risk-adjusted return. It is the average return earned in excess of the risk-free rate per unit of risk.

**Beta** is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

**Disclaimer**

**Disclaimer:** FedGroup Holdings (Pty) Ltd is a member of ASISA. Collective Investment Schemes are generally medium to long term investments. A Money market portfolio is not a bank deposit account. The value of participatory interests may go down as well as up. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The price of each unit is aimed at a constant price of 100 cents per unit. The total return to the investor is made up of interest received and any gain or loss made on any particular instrument. This will have the effect of increasing or decreasing the daily yield but in case of abnormal losses it can have the effect of reducing the capital value of the portfolio. The purpose of the money market yield is to indicate to investors a compounded annual return for all money market portfolios on a comparable basis. The yield calculation is not used for income distribution purposes. A forward looking yield is used. This means that the last seven days' yield (less the service charges, including VAT) is taken and is annualised for the next 12 month period, assuming the income returns are reinvested. Yields for money market funds are published daily. Past performance is not necessarily an indication of future performance. CIS's are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to these portfolios and are subject to different fees and charges. A schedule of fees and charges and maximum commissions is available on request from the manager. The manager has a right to close portfolios to new investors in order to manage them more efficiently in accordance with their mandates. Forward pricing is used. The manager may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressures where a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Income distributions are included in the performance calculations prior to deduction of applicable taxes. Performance numbers and graphs are sourced from FedGroup Asset Managers (Pty) Ltd. NAV to NAV figures have been used. Dealing prices are calculated on a net asset value and auditor's fees, bank charges and trustee fees are levied against the portfolios. Performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. The investment performance is for illustrative purposes only. The investment performance is calculated after taking the actual initial fees and all ongoing fees into account. The reinvestment of income is calculated on the actual amount distributed per participatory interest by using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. Risk profile of the fund ranges from low risk to high risk with a low risk potentially associated with lower rewards and a high risk with potentially higher rewards. Foreign securities may be included in the portfolio from time to time and as such may result in the following: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks and potential limitations on the availability of market information. The price of a participatory interest is a marked-to-market value. The daily cut off time is 14:00 for trades and the valuation point is 22:00. Prices are published on Finswitch by 10:00 daily. FedGroup Management (Pty) Ltd is registered as a Collective Investment Scheme Manager in terms of Section 5 of the Collective Investment Schemes Control Act and is a member of ASISA.
